

Streetcar Track Renewal at College Street and Bay Street Changes to 506 Carlton and 19 Bay routes due to construction

TTC service changes: Starting as early as Monday, March 2, 2026

**Content/timeline accurate at the time of printing*

What we are doing and why

This year, the City of Toronto will be replacing sewer infrastructure on College Street between Yonge Street and Bay Street. The City and the TTC will also renew streetcar tracks on College/Carlton from Bay Street to Church Street, along with upgrading streetcar overhead wiring in the area. Work is anticipated to commence in March 2026 with a pause in construction from mid-April to end of July 2026 and be completed in December 2026. For full construction and traffic details, visit toronto.ca/CollegeCarlton.

TTC service during work at the College and Bay intersection

In anticipation of work starting at the intersection of College and Bay in March, **TTC plans to adjust service on the 506 306 Carlton and 19 Bay routes as early as Monday, March 2, 2026**. The intersection is expected to be fully closed to all vehicles from early March to mid-April 2026. TTC crews will then complete overhead upgrades and commissioning work before resuming regular service in **May 2026**.

Please note that regular service on the 506 306 Carlton and 19 Bay routes are expected to resume in May and during FIFA World Cup 2026™. Additional diversions will be required when work resumes on College/Carlton after FIFA World Cup 2026™. Updated details will be shared in advance.

Starting as early as March 2:

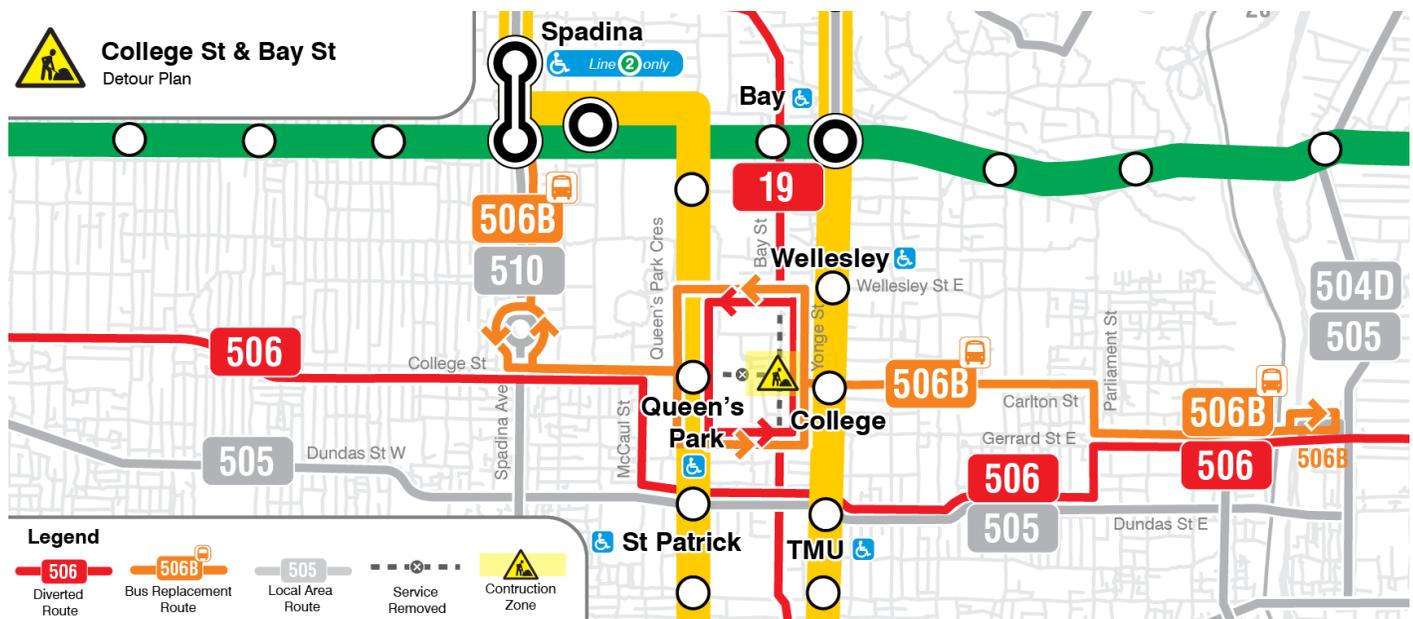

506 306 Carlton streetcars will divert both ways via McCaul Street, Dundas Street, and Parliament Street to regular routing.

A **506B 306 Carlton bus replacement** service will be introduced, operating between Spadina Station and Broadview and Gerrard via:

- **Eastbound:** Spadina, College, University, Gerrard, Yonge, Carlton, Parliament, Gerrard
- **Westbound:** Gerrard, Parliament, Carlton, Yonge, Wellesley, Queens Park, College, Spadina

19 Bay buses will divert via:

- **Northbound:** Gerrard, Yonge, Wellesley
- **Southbound:** Wellesley, Queens Park, University, Gerrard

See reverse page for more details

Overhead upgrades

Over the course of this project, TTC crews will upgrade and commission/test the overhead infrastructure in the area while streetcars are diverting. Work may take place both during day and night shifts and will involve TTC overhead trucks with hydraulic equipment. While efforts will be made by crews to keep noise to a minimum, beeping sounds when the trucks are backing up will be audible. Equipment lights may also be noticeable.

Rail delivery and storage at College and Bay

During the first week of construction, TTC plans to deliver new streetcar rails on flatbed trailers and store them at or near the work zone on College Street and Bay Street. Temporary lane and parking restrictions may be required. **Final storage locations may be adjusted on-site.** As new rail installation progresses, the flatbed trailers will be removed from site.

Locations approximate and subject to change.

Thank you for your patience as we work to improve Toronto's transit infrastructure.
